

TDK-Lambda

PXB15-xxSxx

Single Output 15 Watt DC/DC Converters

The PXB15 series is approved to UL/CSA/EN/IEC 60950-1.

Table of contents

Absolute Maximum Rating	P2	Short Circuit Protection	P34
Output Specification	P2	Thermal Consideration	P34
Input Specification	P3	Heat Sink Consideration	P34
General Specification	P4	Remote ON/OFF Control	P35

Testing Configurations

Input reflected-ripple current measurement

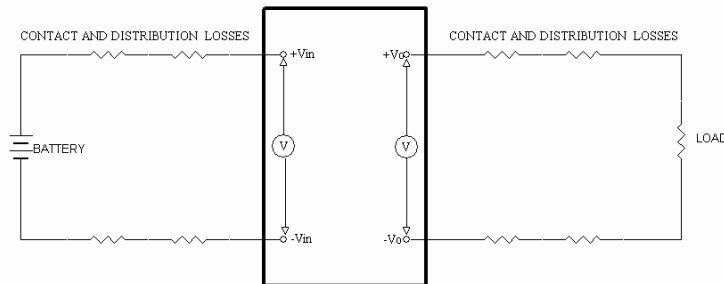

Component	Value	Voltage	Reference
L	12μH	---	---
C1	10μF	100V	Aluminum Electrolytic Capacitor
C2	10μF	100V	Aluminum Electrolytic Capacitor

Peak-to-peak output ripple & noise measurement

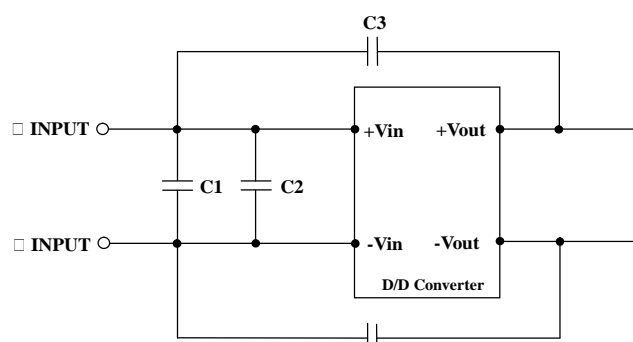

Output voltage and efficiency measurement

Note: All measurements are taken at the module terminals.

$$Efficiency = \left(\frac{V_o \times I_o}{V_{in} \times I_{in}} \right) \times 100\%$$

EMC considerations

Suggested schematic for EN55022 conducted emission Class A limits

Recommended layout with input filter

To meet conducted emissions EN55022 CLASS A, the following components are needed:

PXB15-12SXX

Component	Value	Voltage	Reference
C1	10uF	25V	1812 MLCC
C2	----	----	----
C3,C4	470pF	2KV	1808 MLCC

PXB15-24SXX

Component	Value	Voltage	Reference
C1	6.8uF	50V	1812 MLCC
C2	6.8uF	50V	1812 MLCC
C3,C4	470pF	2KV	1808 MLCC

PXB15-48SXX

Component	Value	Voltage	Reference
C1	2.2uF	100V	1812 MLCC
C2	2.2uF	100V	1812 MLCC
C3,C4	470pF	2KV	1808 MLCC

EMC considerations (Continued)

Suggested schematic for EN55022 conducted emission Class B limits

Recommended layout with input filter

To meet conducted emissions EN55022 CLASS B, the following components are needed:

PXB15-12SXX

Component	Value	Voltage	Reference
C1,C3	10 μ F	25V	1812 MLCC
C2	----	----	----
C4,C5	470pF	2KV	1808 MLCC
L1	145 μ H	----	Common Choke

PXB15-24SXX

Component	Value	Voltage	Reference
C1,C3	6.8 μ F	50V	1812 MLCC
C2	----	----	----
C4,C5	470pF	2KV	1808 MLCC
L1	325 μ H	----	Common Choke

PXB15-48SXX

Component	Value	Voltage	Reference
C1,C3	2.2 μ F	100V	1812 MLCC
C2	2.2 μ F	100V	1812 MLCC
C4,C5	1000pF	2KV	1808 MLCC
L1	325 μ H	----	Common Choke

Input Source Impedance

The power module should be connected to a low impedance input source. Highly inductive source impedance can affect the stability of the power module. The addition of an external C-L-C filter is recommended to minimize input reflected ripple current. The inductor is simulated source impedance of 12 μ H and capacitor is Nippon chemi-con KZE series 10 μ F/100V&10 μ F/100V. The capacitor must be located as close as possible to the input terminals of the power module for lower impedance.

Output Over Current Protection

When excessive output currents occur in the system, circuit protection is required on all power supplies. Normally, overload current is maintained at approximately 150 percent of rated current for PXB15 single output series.

Hiccup-mode is a method of operation in a power supply whose purpose is to protect the power supply from being damaged during an over-current fault condition. It also allows the power supply to restart when the fault is removed.

One of the problems resulting from over current is that excessive heat may be generated in power devices; especially MOSFET and Schottky diodes and the temperature of those devices may exceed their specified limits. A protection mechanism has to be used to prevent those power devices from being damaged.

Output Over Voltage Protection

The output over-voltage protection consists of a Zener diode that monitors the output voltage on the feedback loop. If the voltage on the output terminals exceeds the over-voltage protection threshold, then the Zener diode will send a signal to the control IC to limit the output voltage.

Output Voltage Adjustment

Output voltage set point adjustment allows the user to increase or decrease the output voltage set point of a module. This is accomplished by connecting an external resistor between the TRIM pin and either the Vo (+) or Vo (-) pins. With an external resistor between the TRIM and Vo (-) pin, the output voltage set point increases. With an external resistor between the TRIM and Vo (+) pin, the output voltage set point decreases.

- **Trim up equation**

$$R_U = \left[\frac{G \times L}{(V_{O,up} - L - K)} - H \right] \Omega$$

- **Trim down equation**

$$R_D = \left[\frac{(V_{O,down} - L) \times G}{(V_O - V_{O,down})} - H \right] \Omega$$

- **Trim constants**

Short Circuit Protection

Continuous, hiccup and auto-recovery mode.
During a short circuit condition the converter will shut down. The average current during this condition will be very low and damage to this device should not occur.

Thermal Consideration

The power module operates in a variety of thermal environments. However, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convection, and radiation to the surrounding Environment. Proper cooling can be verified by measuring the point as shown in the figure below. The temperature at this location should not exceed 105 °C. When Operating, adequate cooling must be provided to maintain the test point temperature at or below 105 °C. Although the maximum point Temperature of the power modules is 105 °C, maintaining a lower operating temperature will increase the reliability of this device.

Heat Sink Consideration

The addition of a heat sink may be needed to decrease the temperature of the module; thus increasing its reliability.

Remote ON/OFF Control

The Remote ON/OFF Pin is used to turn the DC/DC power module on and off. The user must connect a switch between the on/off pin and the Vi (-) pin. The switch can be an open collector transistor, FET, or Photo-Coupler. The switch must be capable of sinking up to 1 mA when using a low logic level voltage. When using a high logic level, the maximum signal voltage is 15V and the maximum allowable leakage current of the switch is 50 uA.

Remote ON/OFF Implementation Circuits

Isolated-Closure Remote ON/OFF

Level Control Using TTL Output

Level Control Using Line Voltage

There are two remote control options available, positive logic and negative logic.

a. Positive logic - The DC/DC module is turned on when the ON/OFF pin is at a high logic level. A low logic signal is needed to turn off the device.

When PXB15 module is turned off at
Low logic level

When PXB15 module is turned on at
High logic level

b. Negative logic – The DC/DC module is turned on when the ON/OFF pin is at low logic level. A high logic level signal is needed to turn off the device.

When PXB15 module is turned on at
Low logic level

When PXB15 module is turned off at
High logic level

Mechanical Data

1. All dimensions in inches(mm)
2. Tolerance : $x.xx \pm 0.02(x.x \pm 0.5)$
 $x.xxx \pm 0.010(x.xx \pm 0.25)$
3. Pin pitch tolerance $\pm 0.014(0.35)$

EXTERNAL OUTPUT TRIMMING

Output can be externally trimmed by using the method shown below.

PIN CONNECTION

PIN	PXB15 Series
1	+ INPUT
2	- INPUT
3	ON/OFF
4	+VOUT
5	TRIM
6	-VOUT

OPTIONS

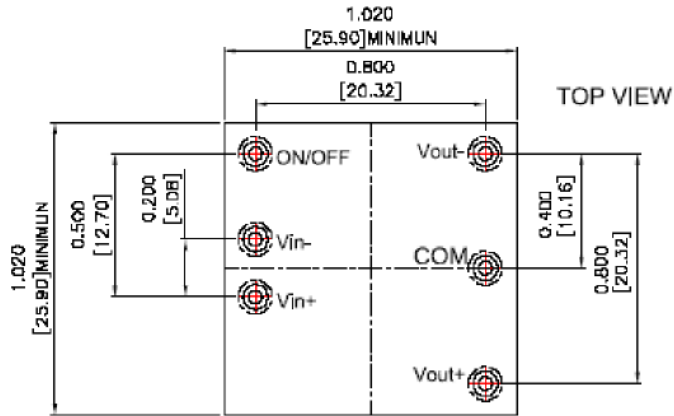

Suffix	Description
P	Positive Logic
N	Negative Logic
T	Trim

-NT as standard. Delete suffix if not required

Recommended Pad Layout

Recommended Pad Layout

ALL Dimensions in inches (millimeters)
Tolerances:xx.xxx in ±0.010 in (xx.xx mm±0.25mm)

PAD SIZE (LEAD FREE RECOMMENDED)
PIN THROUGH HOLE: \varnothing 0.047in(1.2mm)
TOP VIEW PAD: \varnothing 0.079in(2.0mm)
BOTTOM VIEW PAD: \varnothing 0.118in(3.0mm)

Soldering Considerations

Lead free wave solder profile for PXB15-SERIES

Zone	Reference Parameter.
Preheat zone	Rise temp. speed: 3 °C /sec max. Preheat temp.: 100~130°C
Actual heating	Peak temp.: 250~260°C Peak time(T1+T2 time): 4~6 sec

Reference Solder: Sn-Ag-Cu; Sn-Cu

Hand Welding: Soldering iron: Power 90W

Welding Time: 2~4 sec

Temp.: 380~400 °C

Packaging Information

All dimensions in millimeters

10 PCS per TUBE

Part Number Structure

PXB 15 - 48 S 05 -A

Model Number	Input Range	Output Voltage	Output Current	Input Current	Eff ⁽²⁾ (%)
			Full Load	Full Load ⁽¹⁾	
PXB15-12S3P3	9 - 18 VDC	3.3 VDC	4000mA	1375mA	84
PXB15-12S05	9 - 18 VDC	5 VDC	3000mA	1524mA	86
PXB15-12S12	9 - 18 VDC	12 VDC	1300mA	1605mA	85
PXB15-12S15	9 - 18 VDC	15 VDC	1000mA	1506mA	87
PXB15-24S3P3	18 - 36 VDC	3.3 VDC	4000mA	671mA	86
PXB15-24S05	18 - 36 VDC	5 VDC	3000mA	763mA	86
PXB15-12S12	18 - 36 VDC	12 VDC	1300mA	783mA	87
PXB15-24S15	18 - 36 VDC	15 VDC	1000mA	744mA	88
PXB15-48S3P3	36 - 75 VDC	3.3 VDC	4000mA	336mA	86
PXB15-48S05	36 - 75 VDC	5 VDC	3000mA	372mA	88
PXB15-48S12	36 - 75 VDC	12 VDC	1300mA	387mA	88
PXB15-48S15	36 - 75 VDC	15 VDC	1000mA	372mA	88

Note 1. Maximum value at nominal input voltage and full load.

Note 2. Typical value at nominal input voltage and full load.

Safety and Installation Instruction

Fusing Consideration

Caution: This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture. For maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The safety agencies require a normal-blow fuse with maximum rating of 3A for PXB15-12SXX modules and 1.5A for PXB15-24SXX modules and 1A for PXB15-48SXX modules. Based on the information provided in this data sheet on Inrush energy and maximum DC input current; the same type of fuse with lower rating can be used. Refer to the fuse manufacturer's data for further information.

MTBF and Reliability

The MTBF of PXB15S SERIES of DC/DC converters has been calculated using

Bellcore TR-NWT-000332 Case I: 50% stress, Operating Temperature at 40 °C (Ground fixed and controlled environment). The resulting figure for MTBF is 1.330×10^6 hours.

MIL-HDBK 217F NOTICE2 FULL LOAD, Operating Temperature at 25 °C .. The resulting figure for MTBF is 5.630×10^5 hours.
