

Co-Package 2.3 – 2.5 GHz HBT Power Amplifier & pHEMT Low Noise Amplifier
PRODUCTION DATA SHEET
DESCRIPTION

LX5540 is a co-package RFIC consisting of an InGaP/GaAs Heterojunction Bipolar Transistor (HBT) power amplifier and a InGaAs Enhancement mode pseudomorphic HEMT (E-pHEMT) low noise amplifier. Both are optimized for WLAN applications in the 2.3-2.5 GHz frequency range. The PA is implemented as a two-stage monolithic microwave integrated circuit (MMIC) with active bias and output pre-matching. The LNA is fully matched internally and no external matching circuit is required.

Both devices operate with single low voltage supply of 3.3V. The PA offers 28 dB power gain between 2.3-2.5GHz, at a low quiescent current of 80mA.

For 20dBm OFDM output power (64QAM, 54Mbps), the PA provides a low EVM (Error-Vector Magnitude) of 3%, and consumes 145 mA total DC current.

The LNA offers 14 dB gain, 1.5 dB noise figure and a high input IP3 of +4 dBm at 10 mA of DC current.

LX5540 is available in a 16-pin 3mmx3mm micro-lead package (MLPQ-16L). The compact footprint, low profile, and thermal capability of the MLP package makes the LX5540 an ideal solution for medium-gain power transmitter and very low noise receiver requirements for IEEE 802.11b/g applications.
